Director of Nuclear Reactor Regulation  
ATTN: Mr. J. F. Stolz, Chief  
Light Water Reactors Branch #1  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

SUBJECT: Arkansas Nuclear One - Unit 1  
Docket No. 50-313  
License No. DPR-51  
Reduced Pressure Testing of  
Containment Isolation Valves  
(File: 1510)

Gentlemen:

In our letter of February 9, 1979, AP&L submitted justification to do a reduced differential pressure test on certain valves to meet the requirements of 10CFR50, Appendix J. Subsequent to the above, AP&L either made modifications to the valves in question or devised testing equipment to allow full pressure testing. Therefore, AP&L hereby withdraws the February 9, 1981, request for NRC approval of a reduced differential pressure test on valves CV-4446, SF-43, SF-44, CV-1053, CV-1214, and CV-1216.

Very truly yours,

William Cavanaugh, III
