EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 While in mode 5, test curve data received from Pacific Pumps on the recently
03 replaced impeller in centrifugal charging pump 1A indicated that the head at
04 runout was greater than required, and thus the pump was subsequently declared
05 inoperable. This is reportable pursuant to T.S.3.5.2 and 6.9.1.12(i). Since
06 during the time the spare assembly was installed no plant condition existed
07 which caused the pump to approach a runout condition, neither the safe operation
08 of the plant or the health and safety of the public were affected.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 It is unknown as to why the spare impeller assembly received was not the one
11 specified on the Purchase Requisition issued January 19, 1977. The pump was
12 declared inoperable, the impeller assembly in pump 1A will be replaced with the
13 assembly from Unit 2 pump 2A, and CCP 1A Performance Test will be performed to
14 verify the operational readiness of pump 1A.
