Region I  
631 Park Avenue  
King of Prussia, Pennsylvania 19406

Attention: Chief, Materials Radiological  
Protection Section

Reference: Docket No. 30-1912  
Inquiry No. 81-01 6 November 1981

Gentlemen:

This letter is in response to your request for information concerning the disposition of radioactive materials authorized under NRC License No. 20-09503-02 which expired February 28, 1978.

Under the subject license only Cobalt 60 and Strontium 90, as sealed sources were possessed by this institution. On September 18, 1980 all remaining Cobalt (30 millicuries) and Strontium (approximately 50 microcuries, an internal standard for a survey instrument) was transferred to the University of Massachusetts, Amherst, Massachusetts 01003. The University is authorized to possess this material under NRC License No. 20-00882-03 (Exp.: June 30, 1985).

The limited activities conducted under our license were not subject to the reporting requirements of 10CFR20 Sections 20.407 and 20.408.

Since we have not used any material authorized under this license for many years and no longer possess any of the licensed material, we request that NRC License No. 20-00882-03 be terminated.

If you have any further questions, please feel free to contact me.

Sincerely,

*Blake M. Mollaur*

Blake M. Mollaur
