Mr. L. DelGeorge  
Director of Nuclear Licensing  
Commonwealth Edison Company  
Post Office Box 767  
Chicago, Illinois 60690

Dear Mr. DelGeorge:

SUBJECT: DECONTAMINATION OF DRESDEN STATION UNIT 1

The Director of the Office of Nuclear Reactor Regulation has determined that the activities authorized by Amendment No. 35 to Facility Operating License No. DPR-2 present no significant hazards consideration. Accordingly, the Division of Licensing has issued the enclosed Amendment No. 35 to License No. DPR-2 which authorizes the chemical decontamination of the primary cooling system, revises the Technical Specifications to allow deletion of requirements for primary containment integrity during the decontamination, and exclusion of the radioactive liquid storage tanks in the seismically designed Chemical Cleaning Building from the above grade storage curie limitations. The amendment does not authorize operation of Unit 1 subsequent to the chemical cleaning. Such authorization will be the subject of a separate licensing action.

During our review we identified a change to your proposed specification needed to satisfy our licensing requirements. We discussed the change with your staff and they agreed to the change.

This action is supported by the NRC staff's Final Environmental Statement (NUREG-0686) related to Primary Cooling System Decontamination at Dresden Nuclear Power Station Unit No. 1 dated October 1980. A supporting Safety Evaluation and related Federal Register Notice have been issued by a separate transmittal letter.

Sincerely,

ORIGINAL SIGNED BY  
THOMAS WAMBACH FOR

Dennis M. Crutchfield, Chief  
Operating Reactors Branch #5

Dear Mr. DelGeorge:

SUBJECT: DECONTAMINATION OF DRESDEN STATION UNIT 1

The Director of the Office of Nuclear Reactor Regulation has determined that the activities authorized by Amendment No. to Facility Operating License No. DPR-2 present no significant hazards consideration. Accordingly, the Division of Licensing has issued the enclosed Amendment No. to License No. DPR-2 which authorizes the chemical decontamination of the primary cooling system, revises the Technical Specifications to allow deletion of requirements for primary containment integrity during the decontamination, and exclusion of the radioactive liquid storage tanks in the seismically designed Chemical Cleaning Building from the above grade storage curie limitations. The amendment does not authorize operation of Unit 1 subsequent to the chemical cleaning. Such authorization will be the subject of a separate licensing action, which will be pre-noticed in the Federal Register.

During our review we identified a change to your proposed specification needed to satisfy our licensing requirements. We discussed the change with your staff and they agreed to the change.

This action is supported by the NRC staff's Final Environmental Statement (NUREG-0686) related to Primary Cooling System Decontamination at Dresden Nuclear Power Station Unit No. 1 dated October 1980. A supporting Safety Evaluation and related Federal Register Notice have been issued by a separate transmittal letter.

Sincerely,

Dennis M. Crutchfield, Chief

Dear Mr. DelGeorge:

SUBJECT: DECONTAMINATION OF DRESDEN STATION UNIT 1

The Director of the Office of Nuclear Reactor Regulation has determined that the activities authorized by Amendment No. to Facility Operating License No. DPR-2 present no significant hazards consideration. Accordingly, the Division of Licensing has issued the enclosed Amendment No. to License No. DPR-2 which authorizes the chemical decontamination of the primary cooling system, revises the Technical Specifications to allow deletion of requirements for primary containment integrity during the decontamination, and exclusion of the radioactive liquid storage tanks in the seismically designed Chemical Cleaning Building from the above grade storage curie limitations. This amendment does not authorize operations of Unit 1 subsequent to the chemical cleaning. The Commission will separately consider license modifications which may be required for resumption of operation at a later time.

During our review we identified a change to your proposed specification needed to satisfy our licensing requirements. We discussed the change with your staff and they agreed to the change.

This action is supported by the NRC staff's Final Environmental Statement (NUREG-0686) related to Primary Cooling System Decontamination at Dresden Nuclear Power Station Unit No. 1 dated October 1980. A supporting Safety Evaluation and related Federal Register Notice have been issued by a separate transmittal letter.
