RE: Perry Nuclear Power Plant  
Docket Nos. 50-440, 50-441  
Date for Implementation of  
Modified Program for Installation  
and Inspection of Piping Suspension  
System

Dear Mr. Norelius:

By this letter we wish to inform you that full implementation of the Pullman Power Products modified quality program for installation and inspection of pipe supports will be accomplished by February 1, 1982. The modified procedures which were reviewed by Mr. Yin on December 9 and 10, 1981 have been accepted by the Project Organization and the Contractor has started training his personnel to the requirements outlined in our meeting with Region III personnel on December 14, 1981. During that meeting we assured Mr. Yin that the starting date for the new program would be documented in a letter to you when it had been firmly established. The changes made to the pipe support quality program effect the Cleveland Electric Illuminating resolution of the unresolved items 440/81-13-01; 441/81-13-01; 440/81-13-02; and 441/81-13-02 from Inspection Reports 50-440/81-13; 50-441/81-13.

Sincerely,

R. L. Farrell  
Manager, Nuclear Quality Assurance
