ARTHUR E. LUNDVALL, JR.  
VICE PRESIDENT  
SUPPLY

Office of Nuclear Reactor Regulation  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Attn: Mr. R. A. Clark, Chief  
Operating Reactors Branch #3  
Division of Licensing

Subject: Calvert Cliffs Nuclear Power Plant  
Units Nos. 1 & 2; Dockets Nos. 50-317 & 50-318  
Response to I&E Bulletin 79-01B

Gentlemen:

Your request for additional information on environmental qualification (EQ) of safety-related equipment included a list of reports and other references identified by Franklin Research Institute, your contractor, as necessary to complete their review. This information is contained in our central file, and as such is available for your inspection at any time. To release this material from our custody would place us in violation of our Technical Specifications.

We are also concerned because the reports and references requested do not conclusively document qualification; rather, they address only some of the environmental parameters pertinent to the various pieces of equipment. Erroneous conclusions concerning the adequacy of qualification review could be drawn unless other reports and correspondence are considered. Documents addressing the remainder of the relevant EQ issues are available in our EQ central file. We would welcome the opportunity to show your contractor the appropriate documentation in our files and to explain its specific applicability and the extent of qualification supported.

We wish to point out that some of the requested documentation has already been audited (Inspection Nos. 50-317/80-10 and 50-318/80-09). We do not believe that any useful purpose would be served by auditing these documents again. They are, of course, available in our central file should your contractors still wish to see them.

Very truly yours,

8202180113 820209
