OFFICE OF THE  
DOCKETING & SERVICE  
BRANCH

PROJECT NUMBER  
FROM UTIL. PAC. 50-275/323

Mr. Nunzio Palladino  
Chairperson, Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Palladino:

It is my understanding that you and the rest of the NRC are being asked to allow P.G. & E. a license to test Diablo Nuclear Power Plant.

My family and I wish you to know, before you give this license, that the people of California and San Luis Obispo in particular do not want, or need another dangerous nuclear plant on line. The protestors of 1981 showed, among other things, that the plant cannot be secure from outsiders. The plant has already cost P.G. & E. customers a great deal to build. Once a minor or major accident occurs, those costs will be added to the already overburdened P.G. & E. customers' bills.

Consider the design problems, safety hazards, and possibility of a major earthquake in that area. Consider also the accidents at T.M.I. and the recent one in Rochester. After careful consideration I would hope you will agree that Diablo is an unnecessary risk to the state of California and also to the entire nation.

Please withhold Diablo's license.

Thank you in advance for your cooperation.

Sincerely,

*Paul R. Kuhn*

*Mary K. Moorhead-Kuhn*
