Dear Mr. Palladino ~

It has come to my attention that the high power testing license for Diablo Canyon Nuclear Power Plant may soon be granted. I think this is outrageous since the low power testing license has not even been granted + since everyone knows now of the defects in the reactor, the danger to the ocean from waste water disposal there & the absence of safety & evacuation plans for the plant.

I am strongly opposed to nuclear power. And strongly opposed to this plant. Reasonable people everywhere have come to realize that nuclear plants are inefficient expensive, dangerous, poorly constructed & we don't need them to become energy self-sufficient in this Country.

I hope you will use your considerable power against Diablo Canyon becoming another Three Mile Island waiting to happen.

Chairman,

I wish you to reggonize my concern about the safety of a nuclear power plant in a location such as Diablo Canyon.

The plant will be in danger of damage from earthquakes and further construction for safety MUST be considered.

Recent developements from design inadequacies have shown that an entire review of the safety of the plant and surrounding area be reaccessed before final permits are issued.

Thank You,

John Jackson
