Gentlemen:

In reply to your letter dated Dec 22, 1981, regarding the routine safety inspection performed on Nov 18, 1981. The three conditions of non-compliance mentioned in said letter were corrected in the following manner:

- 1) License condition #19 and page 25 of our Administration Manual states that unannounced on the job inspections at intervals not to exceed three months will be performed by the R.S.O. This was not accomplished during the past two quarters because we had little work in the field during that period of time and the R.S.O. was utilized as a Radiographer in the field for the few jobs that we performed.
- 2) 10 CFR 34.43(c) requiring that a record be kept for two years per 10 CFR 34.43 (b) of the last survey prior to locking the exposure device and ending direct surveillance of the operation. Apparently, we misinterpreted this section. We were of the opinion that this meant the survey upon securing the device in the storage vault as recorded on our Radiographic Utilization Log, line 9C, (survey meter reading at the time of return to storage). To correct this error, we are now recording in this space the readings after the last exposure at the surface of the exposure device. We have all records generated by our radiographic operations dating back to the time we took possission of our first source and will maintain these records for at least the specified two year period.
- 3) 10 CFR 20.407(d) requiring the calendar year exposure report. Please find enclosed said report from the years 1980 & 1981. Yearly exposure reports will be forthcoming on a timely basis in the future.

Sincerely,

8203160496 820308 NMS LIC30 21-19111-01 PDR
