US Nuclear Regulatory Commission
Washington, DC 20555

MIDLAND PROJECT
REQUESTED INFO ON LICENSEE QUALIFICATION
FILE: 0505.813/0505.16 SERIAL: 16257

The intent of this letter is to provide additional information requested by your reviewer for Chapter 13. Three areas of interest are detailed below:

Area 1. Procedures performed by Operators

The next revision of the FSAR will modify subsection 13.5.2.1.1 "System Operating Procedures" to refer to subsection 16.6.8 which specifically requires preparation of procedures required by Appendix A of Regulatory Guide 1.33. We have also attached for your information a copy of our Master Procedure Index which lists by title the procedures we have presently identified for use at Midland. It should be recognized that the listing has not been finalized and future additions and deletions may take place.

Operators will exclusively perform all procedures containing the following alpha designators in the procedure number:

OPS - Operations

OPSU - Operations Surveillance

They can also perform as necessary procedures containing the following alpha designations in the procedure number.

ST - STATION normally administrative procedures establishing policies applicable to all departments.

PL - PLANT normally establishes interdepartmental responsibilities when activities involve Operations, Maintenance and Chemistry/Health Physics departments.

PDR ADOCK 05000329
A PDR

Area 2. Operator recognition and Alarm Procedure Implementation

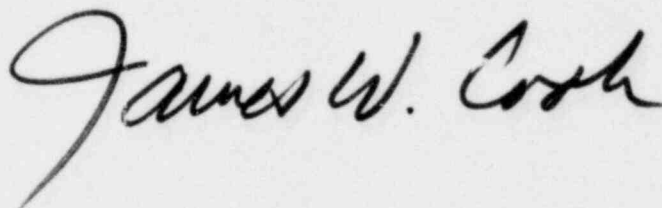

The next revision of the FSAR will modify Subsection 13.5.2.1.5 to indicate the normal operator progression from recognition of an alarm condition, to the proper procedure and to the action portion of that procedure. The methodology presently established at Midland is as follows:

- a. Alarm procedures are in the 7000 series
- b. The last three numeric designators are the alarm panel number (eg Panel 123 would be Procedure 7123).
- c. Alarm panel windows are numbered and the first page of each alarm procedure lists the window numbers, the window inscription and the page in the procedure to go to for the proper operator response to the alarm.

This methodology allows the operator to logically progress from an alarm recognition to response actions.

Area 3. Compliance with RG 1.33 Rev 2

Appendix 3A of the FSAR will be revised to indicate that Midland addresses Revision 2 of RG 1.33. Agreement has been reached with the NRC on the CPCo position taken on Rev 2 of this regulatory guide and any clarifications taken will be as stated in our Quality Assurance Program Topical Report CPC-2-A.
