0 2 | While shutdown for refueling, inspections of small bore piping mechanical  
0 3 | snubbers in accordance with TS 4.7.10a determined that snubber No. 146  
0 4 | was locked up. This is the first inspection of these snubbers which were  
0 5 | added to TS by amendment No. 44 (10-14-81). Health and safety of public  
0 6 | was not affected as analysis determined that stresses were within code.  
0 7 | This is first event with mechanical snubbers. A complete report of this  
0 8 | snubber inspection is included in response to Bulletin 81-01.

1 0 | The reason for failure of snubber could not be determined. This is the  
1 1 | only undetermined cause failure of 85 snubbers inspected. A combined  
1 2 | thermal displacement analysis confirmed that stresses due to this lock-up  
1 3 | were well within Code allowed stresses. The 1/4 Kip snubber was replaced  
1 4 | with a new snubber.
