Mr. B. J. Youngblood  
Chief, Licensing Branch No. 1  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

50-483

Dear Mr. Youngblood:

Callaway Plant; Unit No. 1, Callaway County, Missouri

We have reviewed the Final Environmental Statement for the proposed operation of the planned nuclear power plant identified above. We are providing comments to both restate our concerns with the project as described in the final statement as well as to correct misinformation in the final document. The following are our comments.

Radioactive Waste Treatment Systems

Most of our comments in this section received an adequate response. However, the response was not specific to our concern with the cumulative effects of liquid radioactive effluent discharged to the Missouri River from the three nuclear plants. Detailed calculations based on the liquid discharges from the three plants should have been provided.

Timing of Supporting Documentation for the EIS

Our general comment regarding the unavailability of the Safety Evaluation Report (SER) during the review of the Draft EIS was not addressed. The SER was received by this office soon after our Draft EIS comments were submitted.

A subsequent review of the SER indicated most of the information was adequate to resolve our concerns. There is, however, one exception. The off-site emergency plans will not be completed until January 1983. This deadline conflicts with the statement in the SER that the off-site emergency planning exercise must be completed one year before the fuel loading process which is tentatively scheduled for June 1983. This scheduling conflict should be corrected.

Thank you for the opportunity to review and comment on the Draft Environmental Statement. If you have questions regarding the concerns we expressed in this letter, please contact our office. The staff members most familiar with this project are Messrs. William Brinck and Robert Fenemore. They can be reached at FTS 758-6525 and 758-2921, respectively.

Sincerely yours,

Charles H. Hajinian, Branch Chief  
Environmental Review Branch
