Docket No. 50-336

Northeast Nuclear Energy Company
ATTN: Mr. E. J. Mroczka
Senior Vice President - Nuclear
Engineering and Operations
P. O. Box 270
Hartford, Connecticut 06141-0270

Gentlemen:

Subject: Inspection Report No. 50-336/89-20

This letter refers to the routine inspection conducted by Mr. Robert Winters of this office and Mr. C. V. Dodd a consultant from the Oak Ridge National Laboratory, on November 7-9, 1989 at Millstone Unit 2 in Waterford, Connecticut. Mr. Winters discussed the results of the inspection with Mr. Keenan of your staff at the conclusion of the inspection.

This inspection was directed at activities related to steam generator eddy current testing during the mid-cycle outage. Areas examined during this inspection are described in the NRC Region I Inspection Report which is enclosed with this letter. Within these areas, the inspection consisted of selected examinations of procedures and representative records, interviews with personnel, and observations by the inspectors.

Within the scope of this inspection, no violations were observed.

We note that a meeting to discuss the results of your mid-cycle steam generator inspection has been scheduled at NRC headquarters on February 8, 1990. Results of your evaluation of the eddy current test data, analysis of the removed tube samples, your estimated rate of cracking, and future inspection plans will be subjects of particular interest at that meeting.

No reply to this letter is required. Your cooperation with us in this matter is appreciated.

Sincerely,

Original Signed By:

P. R. DURR
