License No. 37-28540-01
Docket No. 030-31765
Control No. 117698

Oncology Services Corporation
ATTN: Douglas R. Colkitt, M.D.
President
775 South Arlington Avenue
Harrisburg, Pennsylvania 17109

Dear Dr. Colkitt:

This refers to your letter dated February 5, 1993 requesting that your NRC License No. 37-28540-01 be amended to change the Radiation Safety Officer from David E. Cunningham, Ph.D. to Bernard Rogers, M.D. Your license amendment request was also augmented by information provided in your letters dated March 26, 1993 and March 31, 1993. Based on the information you provided, your license has been amended as requested.

You should note that the only changes made to your License are the changing of your Radiation Safety Officer to Bernard Rogers, M.D. in Condition 11 and the deletion of Item C of License Condition 13. In your March 31, 1993 letter you implied that by deleting Item C of License Condition 13, this will also delete Item A. You should note that this is not the case, since installation, relocation, or removal of high dose after loader units containing sources are required to be performed only by persons specifically licensed by the Commission or an Agreement State. Item A of License Condition 13 has not been changed and remains as originally stated in the license. You should also note that your program continues to be under the restrictions indicated in the Order Suspending License issued to you on January 20, 1993.

Please find enclosed an amendment to your NRC Material License.

Please review the enclosed document carefully and be sure that you understand all conditions. If there are any errors or questions, please notify the Region I Material Licensing Section, (215) 337-5093, so that we can provide appropriate corrections and answers.

Please be advised that you must conduct your program involving licensed radioactive materials in accordance with the conditions of your NRC license, representations made in your license application, and NRC regulations. In particular, please note the items in the enclosed, "Requirements for Materials Licensees."

Since serious consequences to employees and the public can result from failure to comply with NRC requirements, the NRC expects licensees to pay meticulous attention to detail and to achieve the high standard of compliance which the NRC expects of its licensees.

You will be periodically inspected by NRC. A fee may be charged for inspections in accordance with 10 CFR Part 170. Failure to conduct your program safely and in accordance with NRC regulations, license conditions, and representations made in your license application and supplemental correspondence with NRC will result in prompt and vigorous enforcement action against you. This could include issuance of a notice of violation, or in case of serious violations, an imposition of a civil penalty or an order suspending, modifying or revoking your license as specified in the General Policy and Procedures for NRC Enforcement Actions, 10 CFR Part 2, Appendix C.

We expect that you will operate a safe and effective licensed program.

Sincerely,

Thomas K. Thompson
Senior Health Physicist
Nuclear Materials Safety Branch
Division of Radiation Safety
and Safeguards
