Edwin I. Hatch Nuclear Plant - Unit 1
Cycle 15 Core Operating Limits Report

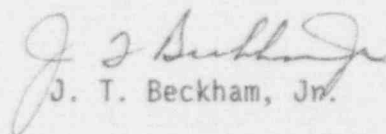

Gentlemen:

By Amendment 168 to the Unit 1 Technical Specifications, the NRC authorized relocation of certain fuel-related limits from the Technical Specifications to the adjunct Core Operating Limits Report (COLR). This letter transmits an information copy of Revision 1 of the COLR for Hatch 1 Cycle 15. Revision 0 was issued on May 6, 1993, with a typographical error on figure 3-8, "Average Planar Linear Heat Generation Rate Limit vs. Average Planar Exposure," for fuel type GE13LUA at an exposure of 35 GWd/st. Since all fuel bundles of this type were new when installed in the Unit 1 cycle 15 core, this exposure will not be reached during this cycle, and this error could not have had any impact on safety. The correct thermal limit data was entered into the Unit 1 process computer prior to beginning of cycle 15 startup.

If further changes to the core operating limits contained in this report are required during the operating cycle, a complete revised COLR will be issued and the appropriate procedures revised.

If there are any questions regarding this report, please contact this office.

Sincerely,

J. T. Beckham, Jr.

MCM/cr
