Edwin I. Hatch Nuclear Plant
Completion of Safety Relief Valve Logic Modification

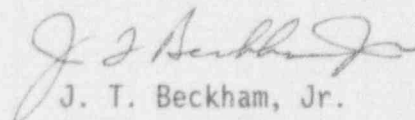

Gentlemen:

By letter dated January 21, 1992, Georgia Power Company (GPC) informed the NRC of plans to install a pressure sensor actuated logic system for the main steam safety relief valves on Plant Hatch during the next refueling outage for each unit. By letter dated April 8, 1992, the NRC requested additional information on this subject. GPC provided the requested information by letter dated April 28, 1992.

This letter provides notification of completion of the subject modifications on both Hatch units. The modification was performed on Unit 2 during the Fall 1992 refueling outage and on Unit 1 during the recently completed Spring 1993 refueling outage.

Please contact this office if you have any questions.

Sincerely,

J. T. Beckham, Jr.
