Subject: Additional Test Results
Foundation Sand - Baffle Dike
Soil Boring and Testing Program
Midland Plant-Units 1 and 2

Gentlemen:

On 1 July 1981, we issued a report presenting test results for fill and foundation materials from the Perimeter and Baffle Dike Areas. No engineering property testing of the foundation sand, however, had been authorized, performed, or reported. Dr. A.J. Hendron, Jr. subsequently requested that a series of isotropically consolidated-undrained triaxial compression tests with pore water pressure measurements (CTU) be performed on samples of foundation sand from the Baffle Dike. Authorization to perform this additional testing was obtained verbally from Isham, Lincoln and Beale and was verbally confirmed by Mr. Ramanujam.

Strength testing of foundation sand from Baffle Dike boring COE-7 consisted of performing a series of four CTU triaxial tests at confining pressures of 0.5, 1, 2, and 3 ksf. Preliminary test results were transmitted to CPCo and Dr. Hendron at the ASLB hearings in Midland. The test results presented herein are complete, have been checked, and supersede the preliminary test results previously issued.

A PDR

Test results are presented in both tabular and graphical formats in the same manner that similar data were included in our previously referenced report of 1 July 1981. To aid in correlating these additional test results with those previously presented, the tables and figures are numbered so as to coincide (insofar as practicable) with those previously used.

Index property test results and other pertinent data are listed for foundation sand samples S-19 through S-23 from boring COE-7 in Table B-7 (6/6). The tube densities reported in the table were calculated assuming the sample diameter was equal to that of the inside diameter of the sampling tube. Where two densities are reported, the larger value was calculated assuming the sample diameter was equal to that of the inside diameter of the cutting edge of the tube.

Particle-size distribution data for selected sieve sizes are summarized in Table B-7 (6/6); complete particle-size distribution curves and descriptions for 8 specimens of foundation sand are presented on Fig. C-7 (7, 8, 9/9).

Results of the \overline{CTU} triaxial test series on foundation sand are summarized in Table E-6. \overline{CTU} test results are presented graphically in a series of three plots (a, b, c) on Fig. E-6. Stress-strain characteristics are presented on the first figure (a), and include deviator stress, obliquity (principal stress ratio), and A-factor plotted vs axial strain. A sketch of the specimen at test completion is also included. Stress paths are presented in p-q diagrams on the second figure (b). On the third figure (c), Mohr circles are plotted on a Mohr-Coulomb diagram of shear stress vs effective normal stress.

As shown in Table E-6, failure characteristics have been summarized for the condition when cavitation occurred within the sample and for the condition of peak obliquity. These conditions are noted by small arrows on the

stress-strain characteristics plot ("a" figure). The condition of peak obliquity is noted by a solid (filled in) symbol on the p-q diagram ("b" figure). Mohr circles are plotted on the "c" figure only for the condition of peak obliquity.

The strength envelope plotted on the p-q diagram ("b" figure) is that determined as an average of the strength envelopes for all tests. The envelope for each test was determined as a straight line between the data point for the condition of peak obliquity (i.e., solid symbol) and the origin (i.e., assumes cohesion to be zero). The slope ($\bar{\alpha}$) of the average strength envelope on the p-q diagram was then mathematically converted to the slope ($\bar{\phi}$) of the strength envelope of the Mohr-Coulomb diagram ("c" figure).

Detailed supporting data for the CTU triaxial tests are presented in boring/sample-number order in Appendix H. These supporting data include copies of the original laboratory data sheet used for set up and take down of triaxial tests (front of form WCC L-202) and the summary calculation sheet for triaxial tests (back of form WCC L-202). Copies of the computer listing of the recorded test data (piston displacement, piston load, and pore water pressure) are also presented, followed by the printout of computed test results.

~ If you have any questions regarding these additional test results, please call.

Very truly yours,

Larry M. Campbell

1	DATA FILE IDENT. NO.	T-274
2	PROJECT NO.	BIC405ST3
3	BORING NO.	COE-7
4	SAMPLE NO.	S-19
5	SPECIMEN NO.	D
6	DEPTH	36.9
7	TEST NO.	1D-077
8	FILE # FOR LOAD CELL OR PROVING RING	2000
9	FILE # FOR PORE PRESSURE CONST.	1000
10	FILE # FOR CELL PRESSURE CONST	2000
11	FILE # FOR PISTON FRICTION CORRECTION	NONE
12	TYPE OF CONSOLIDATION	1'
13	DRAINAGE CONDITIONS DURING LOADING	U
14	MODE OF LOADING	C
15	CELL PRESSURE DURING LOADING	C
16	INITIAL HEIGHT OF SPECIMEN IN INCHES	5.9444
17	INITIAL DIAMETER OF SPECIMEN IN INCHES	2.851
18	INITIAL VOLUME OF SPECIMEN IN CU. CM.	621.865
19	PISTON DIAMETER IN INCHES	.5
20	WEIGHT OF TOP CAP ONLY IN TONS*10**3	0.51
21	WEIGHT OF TOP CAP + PISTON + DIAL IN TONS*10**3	1.27
22	WEIGHT OF TOP CAP + PISTON + DIAL + LVDT IN TONS*10**3	1.595
23	WAS PISTON INTACT DURING CONSOL	NO
24	MEMBRANE THICKNESS IN INCHES	.025
25	MEMBRANE DIAMETER IN INCHES	2.8264
26	FILTER STRIP CORRECTION CONSTANT	0.0
27	RIGHT CYLINDER DISTORTION FACTOR	1.262
28	DOES SPECIMEN HAVE AN INDUCED OCR	NO
29	CELL PRESSURE IN TSF	0.0
30	BACK PRESSURE IN TSF	0.0
31	AXIAL DEFORMATION DURING CONSOL. IN INCHES	0.0
32	VOLUME CHANGE DURING CONSOL. IN CU. CM.	0.0
33	APPLIED AXIAL LOAD IN TONS*10**3	0.0
34	PRE SHEAR CONDITION - CELL PRESSURE IN TSF	8.6998
35	BACK PRESSURE IN TSF	7.200
36	AXIAL DEFORMATION IN INCHES	.040
37	VOLUME CHANGE IN CU. CM.	6.199
38	PISTON DRAG CORRECTION IN TONS*10**3	12.3675
39	SPECIMEN CYCLICLY LOADED BEFORE SHEARING	NO
40	SPECIMEN RECONSOLIDATED DURING CYCLIC LOADING	NO
41	SUM OF VOLUME CHANGES DURING RECONSOLIDATION IN CU. CM.	0.0
42	PORE PRESSURE IN TSF	0.0
43	TOTAL CHANGE IN HT DURING CYCLIC LOADING IN INCHES	0.0
44	OUTPUT UNITS REQUIRED	KSF
45	DATA NORMALIZATION SELECTION	2.0
46	RESULT FILE DESIRED	0.0

A. BASIC RESPT

CIOS 1&K BASIC, VERSION 5.4

(1)
8/8/81

1	DATA FILE IDENT. NO.	T-277
2	PROJECT NO.	81C4055T3
3	BORING NO.	COE-7
4	SAMPLE NO.	S-23
5	SPECIMEN NO.	C4
6	DEPTH	47.1
7	TEST NO.	ID-081
8	FILE # FOR LOAD CELL OR PROVING RING	2000
9	FILE # FOR PORE PRESSURE CONST.	1000
10	FILE # FOR CELL PRESSURE CONST	2000
11	FILE # FOR PISTON FRICTION CORRECTION	NONE
12	TYPE OF CONSOLIDATION	I
13	DRAINAGE CONDITIONS DURING LOADING	U
14	MODE OF LOADING	C
15	CELL PRESSURE DURING LOADING	C
16	INITIAL HEIGHT OF SPECIMEN IN INCHES	5.9389
17	INITIAL DIAMETER OF SPECIMEN IN INCHES	2.8608
18	INITIAL VOLUME OF SPECIMEN IN CU. CM.	625.562
19	PISTON DIAMETER IN INCHES	0.5
20	WEIGHT OF TOP CAP ONLY IN TONS*10**3	0.51
21	WEIGHT OF TOP CAP + PISTON +DIAL IN TONS*10**3	1.27
22	WEIGHT OF TOP CAP + PISTON + DIAL + LVDT IN TONS*10**3	1.595
23	WAS PISTON INTACT DURING CONSOL.	NO
24	MEMBRANE THICKNESS IN INCHES	0.0225
25	MEMBRANE DIAMETER IN INCHES	2.7901
26	FILTER STRIP CORRECTION CONSTANT	0.0
27	RIGHT CYLINDER DISTORTION FACTOR	1.25
28	DOES SPECIMEN HAVE AN INDUCED OCR	NO
29	CELL PRESSURE IN TSF	0.0
30	BACK PRESSURE IN TSF	0.0
31	AXIAL DEFORMATION DURING CONSOL. IN INCHES	0.0
32	VOLUME CHANGE DURING CONSOL. IN CU. CM.	0.0
33	APPLIED AXIAL LOAD IN TONS*10**3	0.0
34	PRE SHEAR CONDITION - CELL PRESSURE IN TSF	7.452
35	BACK PRESSURE IN TSF	7.200
36	AXIAL DEFORMATION IN INCHES	0.0165
37	VOLUME CHANGE IN CU. CM.	6.902
38	PISTON DRAG CORRECTION IN TONS*10**3	10.283
39	SPECIMEN CYCLICLY LOADED BEFORE SHEARING	NO
40	SPECIMEN RECONSOLIDATED DURING CYCLIC LOADING	NO
41	SUM OF VOLUME CHANGES DURING RECONSOLIDATION IN CU. CM.	0.0
42	PORE PRESSURE IN TSF	0.0
43	TOTAL CHANGE IN HT DURING CYCLIC LOADING IN INCHES	0.0
44	OUTPUT UNITS REQUIRED	KSF
45	DATA NORMALIZATION SELECTION	2.0
46	RESULT FILE DESIRED	0.0
