

UNITED STATES GOVERNMENT

# Memorandum

TO : File

DATE: October 28, 1965

FROM : R. F. Fish, Radiation Specialist -RT  
Region V, Division of Compliance

SUBJECT: INSPECTOR'S EVALUATION AS PER 900-15  
VETERANS ADMINISTRATION CENTER  
LOS ANGELES, CALIFORNIA  
LICENSE NO. 4-181-4

CO:V:RFF

This the initial inspection of this license since it became a "broad" license in May 1965. The license authorizes both human and animal use of isotopes. The possession limit is 6 curies, however, the licensee actually possesses less than 1.5 curies. In terms of quantities of isotopes used, the diagnostic and therapy uses represent about 80% or more of the program.

The inspection (conducted September 23, 1965) did not disclose any health and safety problems. It was suggested that individual files of Isotope Committee approved uses and/or users contain the past experience of persons wishing to become users and protocols or references to protocols to be used.
