OFFICE OF PUBLIC AFFAIRS
United States Nuclear Regulatory Commission
Washington D.C. LICENSING BRANCH

Dear Mr. Brenner;

I am opposed to the Shoreham Nuclear Power Station. Evidentiary hearings must be looking for evidence and so I can only say that another Nuclear Power Station, to me, is evidence of further endangering of our own country, the United States of America, and endangering the whole environment due to possible leaks of radioactive waste water.

Would you please be able to tell me: is the cooling water in a Nuclear Power factory released into the Long Island Sound by the Lilco Nuclear factory near Sea Cliff, Long Island? Also, if the coolants aren't water are they a substance which is harmful to the earth's atmosphere like the Freon coolants?

I have given up buying frozen foods to help protect the Earth's atmosphere, in my own small way. The coolants in freezers evaporates and is causing the destruction of the Ozone layer of the atmosphere thereby making skin cancer more likely due to more sun radiation penetrating the atmosphere. There was something about that in the Global Report 2000. For HEAVENS SAKE and for EARTHS SAKE stop radioactive build up and use of radioactive materials. If we stop using Nuclear Power the structures in all the world of any Nuclear development could be negotiated to be not used. I hope you can help the world to stop the use of radioactive weaponry also.

It seems as though radioactive power and weaponry are more harmful to us in our own country. I pray to God that there will be Peace everywhere everyday forever.

Environmentally yours,
Sincerely,

Jeanie P. Wing
