REPLY TO A NOTICE OF VIOLATION

Re: Docket No. 030-31516
License No. 45-25083-01

Dear Sir:

This is in response to a letter from Mr. William E. Cline, Chief Nuclear Materials Safety and Safeguards Branch dated July 27, 1990. Our company received our nuclear density gauge from Troxler Company in May of 1990 and at that time requested personnel monitoring device to be sent to us. We expected to receive shipment about the same time as we received our gauge. However, due to some breakdown in communication our order was not processed. Our construction project on which the gauge was to be used was under way and the portion of this project requiring the gauge was performed between May 25, 1990 and June 8, 1990. Upon completion of this work the gauge was replaced in storage and will not be used again until we are awarded another job requiring its use. This type of work is generally awarded to contractors in the early spring of each year. We therefore do not expect to use our gauge until May of 1991.

Since the inspection by Ms. Waldron we have contacted Troxler to reorder the personnel monitoring device and have been told that while the gauge is in storage that monitoring is not needed, and that when we can establish a date for use in the future a contact with them will deliver the proper personnel monitoring to us.

I hope this information is satisfactory for your needs. If more information is needed please contact me.

Yours Very Truly,

Don W. Shumaker, Jr.
