Gentlemen:

ADDITIONAL INFORMATION REGARDING
PSE&G'S RESPONSE TO GENERIC LETTER 88-11
HOPE CREEK GENERATING STATION
DOCKET NO. 50-354

Public Service Electric & Gas Company (PSE&G) hereby provides a change to the schedule for implementing Generic Letter 88-11. In the letter dated November 28, 1988 (NLR-N88195), PSE&G stated that the revised pressure-temperature curves would be submitted prior to the completion of the second refueling outage.

In order to generate the revised pressure-temperature curves, the surveillance capsule specimen material characteristics must be analyzed. The capsule will be removed from the vessel during the third refueling outage. PSE&G will submit the revised pressure-temperature curves prior to completion of the fourth refueling outage.

In the letter dated April 17, 1990, PSE&G stated that the existing pressure-temperature curves are conservative to 32 EFPY. This change in schedule will not exceed the 32 EFPY.

Should you have any questions regarding this transmittal, please feel free to contact us.

Sincerely,

Thomas M. Crimmins
