Dear Ed:

Enclosed, in accordance with your request, is information concerning the flooding analysis for the Zion IPE.

Flooding Analysis

Page 15 of the CECO Internal Flooding Evaluation Methodology Guideline, labeled as Attachment A, includes the statement, "If equipment is located either directly below or within a ten foot radius of one of these sources, then it will be analyzed with respect to failure modes as a result of spraying or splashing." This particular radius was established as a consensus engineering judgment by Westinghouse and Tenera personnel working on the flooding analysis, with CECO concurrence. In a spray or splash analysis, it is assumed that all equipment within a given radius, no matter what direction, is disabled if a leak occurs. This is very conservative, since it is extremely unlikely that the spray would occur in all directions at once. Use of a thirty foot, or so, spray radius, coupled with the assumption concerning spray in all directions, results in a very conservative consequence analysis, especially for lower-pressure water sources. It was judged, therefore, that a ten-foot radius would yield a more realistic estimate of spray/splash risk.

For the Zion IPE flooding analysis, no supporting calculations for adequacy of drainage were required. This is because, to be of interest, a flooding location had to have a source of water, cause a plant trip, and disable important equipment. Nearly all such places of interest were areas in the general open areas of the building. In all of those cases, a stairway was nearby. Because of the large drainage area provided by the stairways, no detailed calculations were required. Once that water drained into the basement of the respective building, the consequences were assessed. In no case was critical equipment at serious risk. For flooding locations not in the general areas of the buildings, large gratings providing many square feet of drainage area were available, thus eliminating the need for detailed drainage calculations.

The flooding analysis lists no water sources in the switchgear rooms. As you and I observed during the walkdown, there are heating system (HS) pipes in the ceiling of the switchgear rooms. The unit heaters in these rooms are fed by 1" lines, and the pressure in the pipes is only a few pounds. Furthermore the insulation on the pipes would prevent significant spray. Therefore, their contribution to flooding or to spray is considered to be negligible. In addition, flood or spray in a non-essential equipment room could cause a plant trip, but it would not degrade safe shutdown equipment. Loss of equipment in an essential switchgear room would not cause a plant trip.

The CECO methodology does take pipe breaks into account. However, the Zion screening analysis resulted in no locations in which a flooding frequency had to be determined. Attachment B shows Table 5 of the Zion IPE Flooding Analysis Notebook. These are the flood areas not eliminated by coarse screening. Detailed examination of these areas showed that flooding was prevented by adequate drainage, and there were either no spray sources, or spray would not result in a reactor trip.

area, then that area can be eliminated without performing additional time consuming calculations to account for the mitigative features. If the calculated flood height threatens the equipment within the area, then calculations must be performed to account for the mitigative features, such as the drains, sump pumps, and any other flow paths out of the area.

In performing these more detailed calculations for areas, the maximum flood rates and volumes are assumed for the flooding sources. For example, double-ended guillotine breaks are assumed for pipe ruptures and catastrophic tank, valve and pump ruptures are also assumed as the component failures which result in flooding. An example of the tank failure is described in Case 1 given below. A double-ended guillotine break may be found by assuming the maximum flow rate from the pipe. When the maximum expected flood height is calculated, it can be determined whether the equipment in the room can be submerged by taking into account the capacity of the drainage system and other protective features. Equations for calculating the maximum flood in these areas are given in the cases described below. The analyst should also note maximum flow and drainage rates and the time associated with flooding equipment in each particular area. It should also be noted that equipment failures might result not only from submerging but could also be caused from getting wet, (e.g., water spraying, splashing or dripping from a pipe above).

After calculating the maximum flood height in each area, the area is reviewed to determine if there is any equipment located above the maximum flood height that could fail as a result of water spraying or splashing onto it. For this analysis, it is conservatively assumed that if water comes in contact with any electrical equipment (cables, control circuitry), or pump or valve motors that are not covered and/or sealed to protect them from water intrusion, water spraying or splashing onto them will cause equipment failure. The source of the spraying or splashing and the relative position of equipment should be identified. If it is determined (either through the walkdown or be examining the plant general arrangement drawings) that it is feasible for water to splash or spray on equipment, then this must be analyzed in addition to equipment failures resulting from the flood in that area. In this analysis only pipe joints (flanges, valves) and tanks will be considered as sources of spraying or splashing. If equipment is located either directly below or within a ten foot radius of one of these sources, then it will be analyzed with respect to failure modes as a result of spraying or splashing.

The following equations can be used to calculate flood depths for various situations. The equations are given for three cases; tank rupture, flooding inside a curbed area, and flood depth in a room with drainage under a door.

ATTACHMENT

B

Importance Measures in the Zion IPE

Importance Measures from the Westinghouse Code QT (Attachment 1)

The first page (Initiating Event Report) shows core damage frequency associated with each initiator. The next two pages (Top Events Report) show the sum, for each PRT node, of the core damage frequency for every sequence in which that node has failed. (This is a Fussel-Vesely-type importance.) The fourth and fifth pages (Damage States Report) are a similar listing for each core damage state. The final pages (Dominant Sequence Report) are a listing of the top 110 core damage sequences.

Importance Measures from the SAIC code RMQS

To produce this model, the fault tree quantifications (cutsets) for each node in the top sequences (the top 110 sequences, plus others as useful to incorporate key equipment nodes) are combined with the PRT sequences. RMQS uses them to produce basic event importance measures.

Basic Event Risk Reduction Worth (Attachment 2)

This listing includes the basic event identifier and the text from each basic event in the fault trees. For basic event with the highest importance, additional text ("Comments" and "System") have been added for clarification. Fussel-Vesely importance is also available, but $RRW = 1 + (FV)$, so a similar ranking would result.

Basic Event Risk Achievement Worth (Attachment 3)

This listing includes the basic event identifier and the text from each basic event in the fault trees. For basic event with the highest importance, additional text ("Comments" and "System") have been added for clarification.

PRT Node Risk Reduction Worth (Attachment 4)

This listing provides "nodal" importances for each different PRT nodal quantification. Since most operator actions are included as PRT nodes rather than as fault tree basic events, this list provides operator action importances and importances for other PRT nodes, like RWST and safeguards actuation, that are not quantified directly with a fault tree. These importances can be compared to the component basic event importances from Attachment 2. (Operator action nodes all start with "O.")

PRT Node Risk Achievement Worth (Attachment 5)

This listing provides "nodal" importances for each different PRT nodal quantification. Since most operator actions are included as PRT nodes rather than as fault tree basic events, this list provides operator action importances and importances for other PRT nodes, like RWST and safeguards actuation, that are not quantified directly with a fault tree. These importances can be compared to the component basic event importances from Attachment 3. (Operator action nodes all start with "O.")

WESTINGHOUSE CONFIGURATION CONTROL
Westinghouse Proprietary Information

Code: QT-DOS-T4
Version: 1.00

Verified: No

Configuration: February 27, 1992
Execution: March 2, 1992 @ 10:47:32.86
Control Number: 5741995699163

A record of this configuration exists in the
Westinghouse Engineering Technology
Configuration Control Department.

(C) Copyright 1991-1992 WESTINGHOUSE ELECTRIC CORP.
Unpublished work.

ZION STATION

IMPORTANCE OF EACH PRT NODE QUANTIFICATION

Component	Risk Reduction Worth	Description
AC_LSC	1.00	ALIGN CHARGING PUMP SUCTION TO THE RWST
AFI_STR1	1.00	CLOSE MOV FW0050 & 051 ALL POWER AVAIL
AFW_AT	1.00	1/1 AUX FEED TDP OR 2/2 MDP TO 1/4 SGs (OPEN THRTL VALVES)
AFW_STR_5	1.00	1/3 AUX FEED PMPS TO 4/4 SG 147 AVAIL
AFW_LSP_4	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 & 149 AVAIL
AFW_LSP_6	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 AVAIL
AFW_LSP_7	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 149 AVAIL
AFW_LSP_8	1.16	1/3 AUX FEED PMPS TO 4/4 SG NO POWER
AFW_SBDTD	1.00	1/1 AUX FEED TDP TO 4/4 SGs
AFW_TRA_1	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA ALL POWER
AFW_TRA_6	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 AVAIL
AFW_TRA_7	1.00	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 149 AVAIL
AFW_TRA_8	1.00	1/3 AUX FEED PMPS TO 4/4 SG NO POWER
ALT_MFW1	1.00	1/3 MFW TO 1/4 SGs & 1/4 CBPs - LOSS OF 011-1 OR LOSP
AM_ATW	1.00	ATWS MITIGATING SYSTEM ACTUATION CIRCUIT
BUS_LSP_1	1.00	AC POWER WITH LOSP 147,148,149 FAIL
BUS_LSP_4	1.00	AC POWER WITH LOSP 148,149 FAIL
BUS_DSP_1	1.09	AC POWER WITH DLOSP 147,148,149 FAIL
BUS_DSP_2	1.01	AC POWER WITH DLOSP 147,148 FAIL
BUS_DSP_3	1.00	AC POWER WITH DLOSP 147,149 FAIL
BUS_DSP_4	1.16	AC POWER WITH DLOSP 148,149 FAIL
BUS_DSP_5	1.00	AC POWER WITH DLOSP 147 FAILS
BUS_DSP_6	1.00	AC POWER WITH DLOSP 148 FAILS
BUS_DSP_7	1.00	AC POWER WITH DLOSP 149 FAILS
BUS_DSP_1	1.00	AC POWER WITH OFFSITE 147,148,149 FAIL
BUS_OSP_3	1.00	AC POWER WITH OFFSITE 147,149 FAIL
BUS_OSP_4	1.00	AC POWER WITH OFFSITE 148,149 FAIL
BUS_OSP_5	1.00	AC POWER WITH OFFSITE 147 FAILS
CB_1	1.00	1/4 COND BOOSTER PMPS TO 1/4 SGs - LOSS OF 011-1 OR LOSP
CCP_SLO_1	1.02	1/2 CCPs INJECTING TO 2/4 C LEGS ALL POWER
CCP_SLO_4	1.00	1/2 CCPs INJECTING TO 2/4 C LEGS 148 & 149 AVAIL
CCP_SLO_B	1.01	1/2 CCPs INJECTING TO 2/4 C LEGS NO POWER
CCW	1.00	LOSS OF COMPONENT COOLING WATER
CCW_DLP_7	1.00	COMPONENT COOLING WATER W/DLOSP-148&149 FAIL
CCW_LOC_1	1.00	COMPONENT COOLING WATER W/LOCA-ALL POWER
CCW_TRA_1	1.00	COMPONENT COOLING WATER W/TRAN-ALL POWER
CI_ALL	1.00	CONTAINMENT ISOLATION (ESFAS SUCCESS, SPRAY ACTUATED)
CI_3	1.00	CONTAINMENT ISOLATION (ESFAS FAILED, SPRAY ACTUATED)
CSI_1	1.00	1/3 CONTAINMENT SPRAY PUMPS ALL POWER
CSI_5	1.02	1/3 CONTAINMENT SPRAY PUMPS 147 AVAIL
CSI_B	1.02	1/3 CONTAINMENT SPRAY PUMPS NO POWER AVAIL
DCB_LSP_1	1.00	DC POWER WITH LOSP 011-1,111,112 FAIL
DCB_LSP_3	1.00	DC POWER WITH LOSP 011-1,112 FAIL
DCB_LSP_4	1.00	DC POWER WITH LOSP 111,112 FAIL

ZION STATION

IMPORTANCE OF EACH PRT NODE QUANTIFICATION

Component	R. Achievement Worth	Description
AC_LSC	1.00	ALIGN CHARGING PUMP SUCTION TO THE RWST
AFI_STR1	1.00	CLOSE MOV FW0050 & 051 ALL POWER AVAIL
AFW_AT	1.64	1/1 AUX FEED TDP OR 2/2 MDP TO 1/4 SGs (OPEN THRTL VALVES)
AFW_STR_5	1.00	1/3 AUX FEED PMPS TO 4/4 SG 147 AVAIL
AFW_LSP_4	21.7	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 & 149 AVAIL
AFW_LSP_6	5.24	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 AVAIL
AFW_LSP_7	4.77	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 149 AVAIL
AFW_LSP_8	10.2	1/3 AUX FEED PMPS TO 4/4 SG NO POWER
AFW_SBOTD	1.10	1/1 AUX FEED TDP TO 4/4 SGs
AFW_TRA_1	13.3	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA ALL POWER
AFW_TRA_6	1.04	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 148 AVAIL
AFW_TRA_7	1.94	1/3 AUX FEED PMPS TO 4/4 SG OR 1/4 SG W/DA 149 AVAIL
AFW_TRA_8	1.09	1/3 AUX FEED PMPS TO 4/4 SG NO POWER
ALT_MFW1	1.00	1/3 MFW TO 1/4 SGs & 1/4 CBPs - LOSS OF 011-1 OR LOSP
AM_ATW	1.00	ATWS MITIGATING SYSTEM ACTUATION CIRCUIT
BUS_LSP_1	585.	AC POWER WITH LOSP 147,148,149 FAIL
BUS_LSP_4	117.	AC POWER WITH LOSP 148,149 FAIL

Mr. T. P. Joyce

SUBJECT: Zion IPE Interim Deployment Tool - Revision 1

Enclosed for your information and use is Revision 1 to the Zion Individual Plant Examination (IPE) Interim Deployment Tool. This revision incorporates comments received from Zion Station personnel on the original version of this tool.

The tool provides summary IPE results for use by station personnel in:

1. Maintenance prioritization while at power;
2. Maintenance prioritization during an outage;
3. Modification prioritization; and
4. Operator training prioritization.

Although the tool has been written to be self-explanatory and includes a number of examples on its use, a short training session on how to apply the tool could be provided upon request.

The Zion IPE can also be applied to other situations on an "upon request" basis. Attachment A contains a list of those applications.

Should you have any questions on this matter, please do not hesitate to contact Shannon Shaneyfelt (DG extension 7483) or me (DG extension 7489).

George T. Klopp

"UPON REQUEST" APPLICATIONS FOR ZION IPE

The Zion IPE can provide a risk perspective in the following situations on an "upon request" basis:

- TECH SPEC CHANGES, LCO EXEMPTIONS, AOT'S, LER'S
- GENERIC LICENSING ISSUES
- UNIQUE EQUIPMENT OUTAGES
- SAFETY SYSTEM AVAILABILITY GOALS (SETTING/DEVIATIONS)
- SPECIFIC MAINTENANCE RULE IMPLEMENTATION ISSUES
- MODIFICATION PRIORITIZATION
- ALLOWED COMBINATIONS OF UNAVAILABLE EQUIPMENT
- SIGNIFICANT CHANGES IN EQUIPMENT AVAILABILITY

Should a risk perspective be needed in these situations, please contact George T. Klopp, the PRA/HF Group Leader.
