USEcology

MEMORANDUM

TO: Steering Committee Members

FROM: Ronald K. Gaynor *Ron*

DATE: June 7, 1982

SUBJECT: Tritium Migration Investigation

Attached is all the sampling and analyses data which has been received from the Phase 1 study. In a conversation with Buck Foster on June 3, it was apparent that the Phase 1 investigation is substantially complete. Buck had most of the information compiled and ready to mail, however, it was obviously too late to distribute through US Ecology. Therefore, Buck is distributing all the information to the committee members directly in hopes all will receive it prior to our meeting scheduled for 10:00 a.m. on June 10. The information he is sending should include the following:

1. A site map showing the final boring locations.
2. Preliminary boring logs.
3. Contour maps showing the top and thickness of sand zones.
4. A revised bedrock contour map.
5. Analyses from at least two sets of samples.

Please coordinate through me any problems with the schedule for the June 10 meeting.

RKG/ey
