OFFICE OF SECRETARY
DOCKETING & SERVICE
BRANCH

October 9, 1990

The Toledo Coalition for Safe Energy wishes to comment on your proposed plant extension rule.

Once again the public is being had and once again citizens nationwide, who seek to protect their fellow countrymen, are spending time, money, and effort to oppose a rule proposed by a government agency that was established to protect us, yet time and again you have spent our dollars to do the opposite.

Our opposition to nuclear power is without any reserve. No plant should be allowed to operate that can wreak as much damage to our health, our economy, and our psychological well-being as a nuclear power accident can.

How can you say that you are protecting us when you are proposing an extension on plants that already endanger us through their daily operation. Aging nuclear plants with their increased maintenance costs, their decreased safety of which brittleness is one of the most obvious problems, their increased radiation exposure to workers, must not be allowed to operate.

Aging plants will be able to have their license extended and will be allowed to operate under your current proposal with Unresolved and Generic Safety Issues. It is sad enough that this is currently allowed, but to extend a license without insisting that all safety "enhancements" have been carried out, is another way the NRC has lost its' credibility.

We, at the Toledo Coalition for Safe Energy, are once again disgusted with the NRC and their total disregard for protecting U.S. citizens. We urge you to come to your senses and withdraw your proposed rule. Stop wasting our \$ and time.
