

SFP and present fuel racks were in progress in an effort to expedite the proposed SFP modification in the event authorization is received.

As discussed below, the Nuclear Regulatory Commission Staff (Staff) generally opposes Intervenor Garrett's Motion but supports it insofar as it requests the disclosure of information relating to activities currently underway in the SFP.

I. INDEPENDENT INTERVENOR'S INFORMATION MONITOR

Although the Staff concurs with Ms. Garrett's concerns regarding PGE's lack of forthrightness in its statements in PGE-1013 and Revision 1 thereto and in pleadings before this Board bearing on the present state of contamination of the SFP, a hearing in this proceeding has been ordered in which all statements and information made by PSE in support of its application for the proposed SFP modification will be subject not only to scrutiny and examination by the Board but to cross-examination by all other parties as well. If PGE is to sustain its burden under 10 CFR § 2.732 to support its application, the information given and statements made by PGE will have to be true and complete; it will be subject to the test to which all such information is appropriately put - examination on the record. No independent monitor is needed to perform the task - indeed the legal responsibility - already charged to this Board to assure that the record upon which its decision will be based is true and complete on all relevant matters.
