① 10/16/90

Reference: Public Disclosure of Selected
General Licensee Information

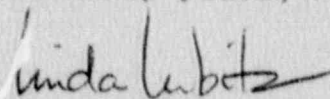

Dear Mr. Meyer:

As a specific licensee in the specialized field of radiation thickness gauging, we are opposed to the public release of names and addresses of general licensees identified in our quarterly reports of transfer.

We believe that the public release of such information may be used by competitor gauging companies to compile comprehensive activity and reference lists to assist them in developing future business. In the very competitive thickness gauging field, we believe that data relating to customer names, addresses and contact people is even more confidential than device model numbers, isotopes and source activity.

We appreciate this opportunity to express our opposition to your proposed change in policy.

Sincerely yours,

Linda Lubitz
Regional Manager
