We have completed our review of your May 19, 1982 response to our information request of May 3, 1982. The response and information request concern your February 25, 1982 submittal of environmental monitoring data. We conclude that the responses to Items 2 and 3 are satisfactory and require no further action.

However, the response to Item 1 indicates that present location of the background air monitoring station is not acceptable. We therefore request that you provide us with a proposed site for the relocation of the background station, along with your rationale for choosing the site, by September 1, 1982.

Should you have any questions, please contact Pete J. Garcia, Jr. of my staff at 301-427-4109.

Sincerely,

Original signed by
