NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

NRC PDR

December 20, 1978

Docket No. 50-346

Mr. Lowell E. Roe
Vice President - Facilities
Development
Toledo Edison Company
Edison Plaza
300 Madison Avenue
Toledo, Ohio 43652

Dear Mr. Roe:

By letter dated December 12, 1978, you provided a list of plant modifications which are being made at the Davis-Besse Nuclear Power Station Unit 1 to implement the Fire Hazard Analysis Report. The letter did not identify the areas where the specific modifications are being made. You have indicated that this information is available in your Fire Hazards Analysis; however, we cannot determine from that analysis which modifications have been completed and what modifications are remaining to be completed. We need this information in order to complete our safety analysis report.

We need your schedule for completing the modifications listed in your letter dated December 12, 1978. A commitment to complete these modifications by April 22, 1980, (License Condition 2.c.3(h)) would be considered acceptable except for the fire protection modifications for the service water pump room which we consider should be completed by July 1, 1979.

We need your schedule for implementing procedures for providing a back up to the service water system from the circulating water system. It is the staff's position that this date would be the same date as for implementing the emergency hot shutdown procedures in the event of a fire.

We request that you provide us within 15 days of receipt of this letter, (1) the identification of the specific areas for modification numbers 1 through 10 and 13 as listed in your letter dated December 12, 1978, (2) an end date for completing the modifications listed in your letter dated December 12, 1978, and (3) a schedule for implementing
