EVENT DESCRIPTION AND PROBABLE CONSEQUENCES ⑩

② With the unit at hot shutdown prior to a scheduled refueling outage (normal operating  
③ pressure and temperature), both source range nuclear instruments were inoperable. This  
④ is an LCO per T.S. Table 3.5-2; at least one of two source range channels shall be  
⑤ operable to achieve and maintain hot shutdown. This is reportable per T.S.  
⑥ 6.9.2.b(2). Since hot shutdown was maintained, there was no effect on public safety  
⑦ or plant operation.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS ㉟

① The source range detector failures were attributed to an accumulation of water in the  
② instrument cannisters. A spare detector was installed until replacement of the normal  
③ channel detectors was made. Investigation is continuing to determine the necessary  
④ corrective action.
