SOUTH CAROLINA ELECTRIC & GAS COMPANY
POST OFFICE BOX 764
COLUMBIA, SOUTH CAROLINA 29218

T.C. NICHOLS, JR.
VICE PRESIDENT AND GROUP EXECUTIVE
(Nuclear Operations)

September 23, 1980

Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Subject: Virgil C. Summer Nuclear Station
Docket No. 50/395
Underclad Cracking in Reactor
Vessel Nozzles

Dear Mr. Denton:

South Carolina Electric and Gas Company, acting for itself and agent for South Carolina Public Service Authority, provides information request in Mr. A. Schwencer's letter to Mr. E. H. Crews regarding underclad cracking in reactor vessel nozzles. NRC questions and our responses are provided below:

1. Nozzle base metal material specification type and grade, including material certification data of material used in construction.

   The base material of all nozzles in the Virgil C. Summer Nuclear Station reactor vessel is ASTM A-508 Class 2. The base material certification data is provided as Attachment I.

2. The clad process type, electrode size and number of clad layers, including material certification data of material used in construction.

   This information is presented in Attachment II.

   Certification data for cladding material is not required, and, therefore, not available.

3. Heat input (amps, volts, speed) for each clad layer.

   This information is provided in Attachment II.

A

4. Clad pre-and post-heat temperature and interpass temperature for each clad layer.

   This information is provided in Attachment II.

5. Vessel stress relief temperature.

   Final Post-Weld Heat Temperature (PWHT) = 1100° - 1175°F held for one hour per inch of weld thickness.

6. The manufacturer or subcontractor who fabricated the vessel and applied the nozzle cladding.

   Chicago Bridge and Iron Company.

If additional information on this subject is required, please let us know.

Very truly yours,

T. C. Nichols, Jr.

[illegible] Forge certifies that all applicable requirements of [illegible]-2 & CBI Spec. HS-111, Rev. 3 & QAS-101, Rev. 3 have been complied with.

[illegible] specimens were removed from the 180° location adjacent [illegible] charpy V-notch specimens used for the transition curve.

We hereby certify the above results to be correct as contained in the records of the Company.
