March 28, 1950

Dear Mr. Denton,

I am firmly opposed to even the consideration of re opening Three Mile Island's plant. I am quite concerned that in the clean-up of TMI, waste water might be dumped into the Susquehanna River, which runs through several states to Maryland. Haven't we all had a big enough scare, with many medical problems starting to emerge as a result of last year's accident? Please see, please understand, that the public does not want

~~never~~ nuclear power plants
in our back yards, waste carried
through our streets, or this
form of energy/weaponry
developed year after year.
We are on the side of
life — is the Nuclear

Regulatory Commission??

- 1) Do not re-open Three Mile Island
- 2) Work for the shut down of all nuclear plants.
- 3) Begin to undo the damage this nuclear toy has effected. You do not know & cannot undo the damage that is at hand if power plants are allowed to remain. The accident-error is far to great.

Sincerely, Patricia Ciancisi
