U. S Nuclear Regulatory Commission
% Hon. John F Ahearnes, Chairman
Washington, D C 20555

Hon. Chairman:

I Believe in February of 1980, I wrote you also other Commission, members of the Regulatory Commission, regarding General Public Utility Company 3 Mile Island operations.

As a small GPU Stockholder, we have been wishing we might have a reply from your Offices, with regard to when a Possible time for a restart up of Unit No. 1, Is expected to be back into service?

I notice also Unit No 2 is scheduled for a Clean up later into 1980's , I wonder why such delay? This Utility Services Approx. 360,000 Customers in this area.

I have never read any Newswhere Nuclear Plants, has caused any deaths, But Still Politics seems to favor Possibly closing down these Plants, Also fail to License Plants that are almost Completed, to Operate, such as The Black Fox Plant in Oklahoma, being built by Public Service Company of Oklahoma.

However the possibility of Deaths by Drugs, also Alchholism is getting greater it seems every day, the Youth are being influinced, every Day, But the Government seems to not Do much about these Deaths? I read where the Government wants to Legalize some Drugs, and make it possible for more Deaths.

Do you expect the Regulator Commission to shut down plants that are Producing Electricity? Also fail to give License to Nuclear Plants trying to Produce Electricity, some are almost ready to Start New Plants?

Any information you might be able to give will be greatly appreciated.

Yours very Truly,

& Frank R Ruthrauff
& Meribel B Ruthrauff Jt Owners of GPU
