

Dec 9, 1980

United States Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sir:

The McGuire Nuclear Station is scheduled to open soon in the vicinity of Charlotte, N.C. According to SECY 80-107 dated June 26, 1980 the containment is built to withstand 15 lbs/in² of pressure. This would seem insufficient since a level of 28 lbs/in² was reached at Three Mile Island.

Given this information it would seem appropriate to reopen the hearings concerning this installation.

Sincerely,

Thomas W. Neumann
