The Honorable John F. Chearne, Chairperson
U.S. Nuclear Regulatory Commission
Washington D.C. 20555

Dear Sir:- I am not given to lobbying very often, because too often it is for small selfish groups, but in this case it is a matter that can hurt all of us. I feel very strongly that we need all the sources of energy production that we can develop, that includes "3 mile island".

All forms of energy have advantages & disadvantages. I need not enumerate them for you I am sure. But we can not do without any single one of them.

Has our radical groups admit, that T M 1 was the worst? Then, no one killed, no one injured, or a mechanical & Chemical break down why the big fuss! Compare this accidents with the daily losses of lives, air pollution, diseases of long suffering, sea water pollution and land damages of coal & oil. I am not condemning them. I believe in improvement & progress.

I believe that the Federal, State government and all the people should share in paying the bills and enjoy the energy use and savings of T.M. 1. lets get it going

Mr & Mrs Harry A. Frohman
