Attention: Mr. U. Potapovs, Chief
Vendor Programs Branch

Reference: Docket No. 9900765/82-01

Dear Mr. Potapovs:

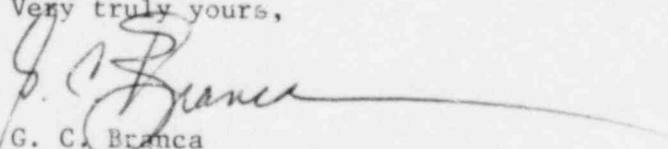

Your letter of 12 May 1982, indicated that you had no further questions at that time, and would review our corrective actions and preventive measures during a future inspection. In a subsequent conversation with you regarding your reply, you indicated that this was a standard reply which basically implied the following:

C&D Batteries corrective action to the issue of notice was accepted as a satisfactory response to the notice of violation and no additional actions by C&D Batteries were required. In essence, the notice of violation is closed out; however, the corrective action must be verified by future inspection before it could be approved as adequate.

If the above is an accurate statement, would you please so indicate in writing to us.

Your cooperation in this matter is appreciated.

Very truly yours,

G. C. Branca
Director Quality Assurance
