The Hon. John F. Ahearn  
Chairman  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Ahearn,

As a resident in close proximity to Three Mile Island I am concerned about the future of nuclear power. I think Unit One at the Island should be restarted as soon as possible.

This action would put consumer electric bills and using the knowledge gained from the "accident" would provide clean, safe energy. I think it is unwise in the present world situation to totally eliminate any alternative to oil consumption.

I recently discovered the fact that everytime a coal fired power plant "blows its tubes," the black spot we see emerging and which covers all things is highly radioactive.

It seems to me that nuclear generated power plants are less a hazard than these coal fired plants.

We need more power everyday, and since we are

same nothing to know, our best friend is

nothing given.

Expect there will be no limit on our own

no possible.

I would also like to see some concrete

guidelines come from the NRC to the operators

of these mile island. It seems that no person

no guidelines are issued, they are changed from

our previous function under these conditions?

Tell me what the regulations are and I

am sure they will comply.

After I must work and cannot attend the

meeting, I would like to be kept up to date

company, important decisions made.

Thank you.

Sincerely yours,

Paula K. Riggs
