FOREWORD

The Summary Information Report (SIR) provides summary data concerning NRC and its licensees for general use by the Chairman, other Commissioners and Commission staff offices, the Executive Director for Operations, and the Office Directors. SIR is published quarterly by the Management Information Branch (49-27834) of the Office of Resource Management.

NOTE: Based on applicant estimates of dates for construction complete. Three Mile Island 2, Humboldt Bay, and Dresden 1 are not included in the above figures as they are shut down indefinitely. Also, not included are two plants under construction permit review which have announced their intention of cancelling, Pebble Springs 1 and 2.

AVERAGE UNIT CAPACITY FACTORS USING MAXIMUM DEPENDABLE CAPACITY

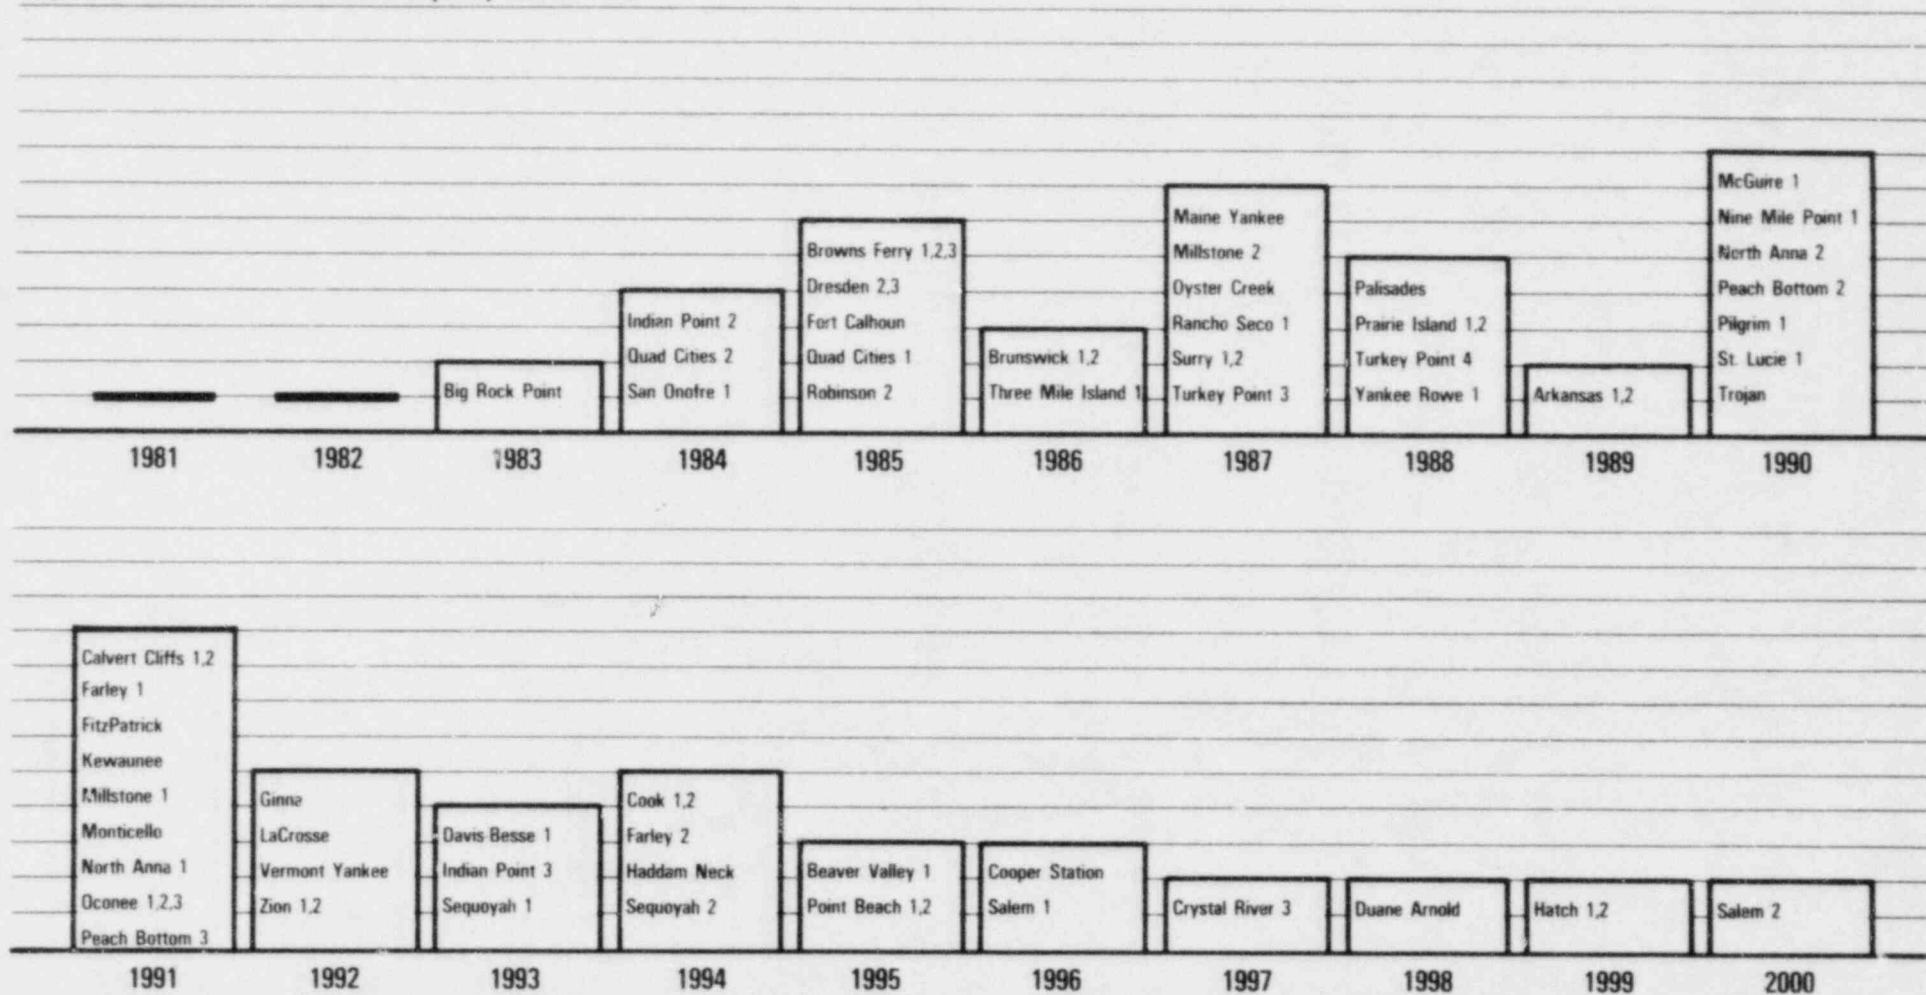

The term "Maximum Dependable Capacity" Net (MDC net) means the gross electrical output as measured at the output terminals of the turbine generator during the most restrictive seasonal conditions (usually summer) less the normal station service loads.

The term "Unit Capacity Factor Using MDC Net" = $\frac{\text{Net Electrical Energy Generated} \times 100}{\text{Period Hours} \times \text{MDC Net}}$

Section 6. Export and Foreign Power Reactor Licenses

Major and Minor Export Licenses.	6.2
Summary of Foreign Power Reactors.	6.3

EXPORT LICENSES-MAJOR AND MINOR

NO. ISSUED

The term "major export licenses" means licenses for the following (1) reactors (facilities); (2) special nuclear material in quantities in excess of 1 effective kilogram; (3) source material in quantities in excess of 10,000 kilograms; (4) heavy water or nuclear grade graphite in quantities in excess of 1000 kilograms; (5) license involving reprocessing, enrichment or heavy water activities; and (6) exports involving special policy considerations.

The term "minor export licenses" means all other licenses including most licenses involving byproduct materials and components.
