Washington, DC 20555

Dear Sirs:

I am excited and pleased that LES has opted to build their enrichment plant in this area. All my friends, and their families, totally support this facility as I do. These people are well known and represent the great majority of population in this area.

We are all embarrassed that so few white individuals who are so vocal can create such misguided havoc. These few white instigators have garnered many followers through dishonest information and scare tactics. Many good, honest, hard-working black people have decided to follow these vocal few, because they were told their babies would be deformed, they would become impotent, they would get cancer and they would have to haul their water in because they couldn't use water from their wells.

A few people of "CANT" have gotten much attention and financial support from a variety of environmental groups. This gives these few considerable power and recognition. Due to their vocal and media exposure, the appearance is that "CANT" represents a far greater percentage of support than is the case. I believe 80 to 85% of the total population in this area support this plant, but they, unfortunately, are not as vocal.
