Nuclear Materials Safety

Reply to a Notice of Violation

Dear Mr. Caniano

This letter is in response to the two violations discovered during our routine safety inspection on Aug 17-18, 1993.

A. Both Jim Walker and Tom Barthalow had completed all aspects to their radiation safety training and I have observed both persons in their use of materials while in the shop. Further Jim Walker was utilizing materials, as a rigger, back in January while I was inspecting Roger Butler for certification. Roger was the logging supervisor that evening. I should of certified both individuals that evening. (wrote up an inspection report on Jim)
To correct this problem, first I inspected all personal while on location during late August and wrote up an inspection report for all individuals. Second, I will make it very clear to any new personal, that even thou they may have been a logging supervisor with other service company, they can not utilize any materials with supervision till I have inspected them and certified their use of materials.

B. The transport containers in question were marked during the source inspection on April 13, 1993. Since then the labels were worn off and new labels were not available at this time to replace them. (I wasn't aware that I could make temporary labels using masking tape and a marker). New labels have placed on the transport containers and extra labels will be on hand.

If you have any questions or concerns please contact me at 216-452-0513. Thank you for your time.
