Dear Mr Hickey

I am a concerned citizen and I own property in the Center Springs Community, which is one of the communities nearest to the proposed site for the "Chabane Enrichment Center".

I feel that the human element was left out of the report or impact statement. There was no mention of the impact it would have on the people in "Center Springs" and "Forest Grove" communities. The people in those communities are primarily property owning blocks who worked extremely hard for what they have. The water supply comes from "springs" thus the name Center Springs.

Even tho some people have running water in their homes, it still comes from the same source. Any nuclear mishap could devastate the community, and most of the people would have no other place to go. Many of these people live within 1 to 2 miles from the proposed site.

As a person who grew up in the community,
I feel that people should not have to
suffer for the sake of government projects.
The few jobs that people in Charboneau
Parish as a whole would qualify for would
not be high tech, therefore most of the best
paying jobs will go to people from other
places.

I beg you to reconsider the proposed site.

Sincerely
Murren H. Catlinham.
