Chief, Enrichment Branch
Division of Fuel Cycle Safety and Safeguards
Office of Nuclear Material Safety and Safeguards
U. S. Nuclear Regulatory Commission
Washington, D C 20555

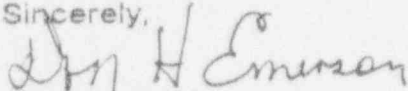

Dear Sirs:

We want to express our support for the proposal to build an enrichment plant in Homer, known as the Claiborne Enrichment Center, and operated by the Louisiana Energy Services. We are a young couple with two young children to raise, and do want to encourage the regulations be enforced for a safe environment.

We are confident that the Nuclear Regulatory Commission is competent to oversee the building and operation of the plant, and that all rules will be enforced. All the information we have read indicates a level of risks that is acceptable; not in excess of other jobs that are available in this community.

I am of the opinion the large majority of the people of Claiborne Parish support this project. I know most of my friends do. I believe that you should approve this project just as soon as you are satisfied that all laws and environmental safety rules are obeyed.

Sincerely,

Don H. Emerson
