Chief, Enrichment Branch  
Division of Fuel Cycle Safety and Safeguards  
Office of Nuclear Material Safety and Safeguards  
U. S. Nuclear Regulatory Commission  
Washington, D C 20555

Dear Sirs:

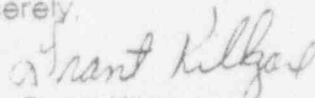

I want to write you and express my support for the proposal to build a uranium enrichment plant in Homer, known as the Claiborne Enrichment Center

I have read much of the information that has been published in the community, and consider the proposal one that is reasonable and is worthy of supporting

I am confident that the Nuclear Regulatory Commission is competent to oversee the building and operation of the plant, and that all rules will be enforced. I am a young person who has many years to expect to live in Homer and know that job opportunities and improved commercial activity is vital to our future

I am of the opinion the large majority of the people of Claiborne Parish support this project. I believe that you should approve this project just as soon as you are satisfied that all laws and environmental safety rules are obeyed.

Sincerely,

Grant Kilgore
