

①
Code Development R & A

GH Nabez

B. Sherin -

12/14/88

- 1) Feels there is a need for supplemental guidance to the ANSI std & R6 in the area of computer codes.
- 2) E & E - Must tie commitment to req requirements, if they don't exist, they need to be developed.
- 3) W. Hays - Went over each of the 26 items and identified regulations, R6, SRP, etc. where these items are covered.
 - Seems to be a lack of communication.
 - DAB needs to review their SRP to make certain that computer codes are adequately addressed.

(2)

12/14/84

4) Item 18 as example 1

ER suggests that in the review of a topical report that the reviewer examine the applicant's file as that report. This should be done fairly early in the review and could preclude many questions. W has pointed out that this should somehow be in the record. This could lead to propriety SERs and this is not very desirable.

* Vendors should address this in their
in R6? procedures.
=

ER should answer the above by asking the proper question and in the SER make this a controlled change & restriction for future modifications. This should be in SK1.

* Candidate for modification to R6.164 for codes in general. If this needed, it should a statement be included in R6.6 to drive this?

(3)

12/19/84

5) Item 3 as example 2

- ANSI Std. for certification - N626.3
- * R6 to enclose this std?
- No requirement for certification in N45.2.11 or R6 1.64

Need for certification - A minor that everything that is required for the code has been done

6) Code (computer) inspection procedure should be recommended for D.C.

7) All of these requirements could be put in a SRP branch position

8) Item 2 as example 2 - This is covered in
- ANSI ~~N45.2.11~~ 6.7.1(2)

* 9) A statement should be made in
the R6 1.64 that this system is certified
