Dear Sir:

Subject: Report of Investigation of Possible Testing Deviations under 10 CFR Part 21

Reference: a) Teledyne Thermatics ltr dtd 22 October 1993
b) Teledyne Thermatics ltr dtd 18 January 1994

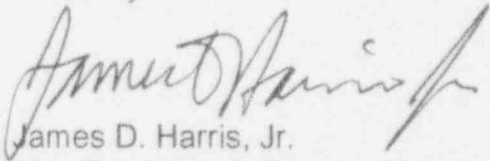

Thermatics Operations, ("Teledyne Thermatics"), a business unit of Teledyne Aircraft Products, has completed an investigation of possible departures from customer testing requirements for certain wire and cable products supplied to operators of nuclear power generating facilities as first reported in reference a).

The submission date for this final report was extended in accordance with reference b).

Although the investigation confirmed that departures from customer testing requirements occurred, the investigation revealed no evidence of any defect, safety, or operability concerns with the wire and cable products sold to these customers. As such, no actions are necessary with respect to this wire and cable. Nonetheless, Teledyne Thermatics has instituted substantial corrective measures to ensure that departures from customers' testing requirements do not recur. The investigation determinations and findings, as well as the corrective actions, are fully explained in the enclosed report.

Teledyne Thermatics would appreciate the opportunity to meet with NRC staff to discuss the matters addressed in the report, and to answer any questions you may have.

Sincerely,

James D. Harris, Jr.
Vice President & General Manager
