

Wisconsin Electric POWER COMPANY
231 W. MICHIGAN, P.O. BOX 2046, MILWAUKEE, WI 53201

July 9, 1982

Mr. H. R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. NUCLEAR REGULATORY COMMISSION
Washington, D. C. 20555

Attention: Mr. R. A. Clark, Chief
Operating Reactors Branch 3

Gentlemen:

DOCKET NOS. 50-266 AND 50-301
DIESEL GENERATOR OUTAGE INFORMATION
POINT BEACH NUCLEAR PLANT, UNITS 1 AND 2

Mr. Clark's letter dated June 22, 1982 requested additional information to enable the NRC staff to complete its review of TMI Action Plan Item II.K.3.17, "Report on Outages of ECCS Systems". Specifically requested, as identified in the enclosure to the June 22 letter, was a complete summary of diesel generator system outages during the last five-year period of operations. Outages for both surveillance testing and planned, unplanned, or preventive maintenance were requested to be included in this summary.

On August 21, 1981, Wisconsin Electric submitted to the NRC a response to Mr. Clark's letter dated July 20, 1981 concerning the reliability of the on-site stand-by diesel generators. Included with this questionnaire response were data tables listing diesel generators. Included with this questionnaire response were data tables listing diesel generator operating data, scheduled and unscheduled downtime records, and diesel generator equipment modification information. This information covers the same five-year period of operations, 1976 through 1980, as that information provided with our March 31, 1981 letter for NUREG-0737, Item II.K.3.17.

A046

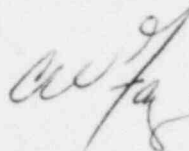

Mr. H. R. Denton

We trust this reference to diesel generator reliability and outage data already submitted will enable your staff to continue its review of this item. Please contact us if any further clarification is necessary.

Very truly yours,

A handwritten signature in cursive script, appearing to read 'C. W. Fay', is written over a faint circular stamp.
