Entergy Operations, Inc.  
River Bend Station

Docket: 50-458  
License: NPF-47

During an NRC inspection conducted on January 10-14, 1994, a violation of NRC requirements was identified. The violation involved a failure to maintain an uninterruptible power supply to the security systems. In accordance with the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C, the violation is listed below:

Condition 2.D of the River Bend Station Operating License NPF-47 requires that the licensee maintain in effect and fully implement all provisions of the Commission approved Physical Security Plan. This includes amendments and changes made pursuant to the authority of 10 CFR 50.54(p).

Failure To Maintain Uninterruptible Power to the Security System:

Paragraph 7.5 of the Physical Security Plan requires that security equipment be furnished uninterruptible power from buses that are also backed by standby diesel generators that relieve the battery system.

Contrary to the above, the inspector identified on January 13, 1994, that the uninterruptible power system does not meet the Physical Security Plan requirement in that it consists of only one diesel generator.
