Attention: Mr. William O. Miller  
Isotopes Branch  
Division of Licensing & Regulation

Reference: L & R: IB:WPN (34-653-2)

Gentlemen:

In support of our application for renewal of Byproduct Material License No. 34-653-2, we are forwarding the attached procedures and additional information requested in your letter of August 22, 1962.

We are not planning to institute a program for training of radiographers essentially for the following reasons:

- a) All exposures are made at one site only.
- b) Only D. R. Hale and W. A. Gilroy are authorized to handle the radioactive source.
- c) We have set up a procedure for assuring understanding of and compliance with existing procedures and regulations.
- d) We are limiting our radiography to the 500-millicurie source only.

The device used for exposing the 500-millicurie source has been modified to provide both for locking the source in the device and for locking the shutter in the closed position. Photographs of the device are enclosed which show this.

We hope that the information submitted is sufficient to permit renewal of our license for use of the 500-millicurie source only. The other sources on hand would be kept in storage and not used without proper application to your office.

Very truly yours,

*John E. Dawson*  
John E. Dawson
