RE: Termination Request
Source and Byproduct Material License SUA-1556

Dear Ms. Miller-Corbett:

On June 21, 1993 the U.S. Nuclear Regulatory Commission issued Bingham Engineering a Byproduct Material License SUA-1556. This license authorized Bingham Engineering to receive 25 kilogram (kg) of mill tailings to perform laboratory analysis. The license was issued to be used in accordance with statements, representations, and conditions contained in the licensee's submittal dated May 12, and June 9, 1993.

This letter request the termination of this license (SUA-1556). As indicated in our May 12, and June 9, 1993 submittals we were proposing to receive and handled 25 kilograms of mill tailings to produce a leachate solution for our permeameter tests. This request for a byproduct license was necessary for a specific project and scope of services for Envirocare of Utah, Inc. (Client). Further agreements with our Client relating to the need for permeameter testing of the mill tailings leachate resulted in not receiving or handling of the mill tailings.

A leachate solution necessary for our laboratory testing was generated at Barringer Laboratories, an EPA certified laboratory. The need for a byproduct license is no longer applicable and we request the license be terminated. We have provided the State of Utah, Division of Radiation Control our proposed work plan for the handling of the material received from Barringer. They have informed us that there is no special requirements for the quantities we have received.

Should you have any questions, please call David K. Cline at (801) 532-2230.

Sincerely,

BINGHAM ENVIRONMENTAL, INC.
