

VII. UNRESOLVED SAFETY ISSUES

132. During the prehearing stages of this proceeding, the only generic safety issue that was placed in controversy was that introduced by Intervenor's Contention 6B, namely, anticipated transients without scram. Contention 6B was dismissed through summary disposition by this Board's order of March 17, 1982.

The Staff has included a discussion of generic safety issues applicable to this proceeding in Appendix C of the Palo Verde SER. (Staff Ex. -2), NUREG-0857, November 1981. Therein, the Staff reviewed each of the relevant unresolved safety issues identified through late 1982 and the associated Task Action Plans that address their resolution. For each of the issues, the Staff concluded that the operation of the Palo Verde facility need not await its ultimate resolution. Id. at C-7 thru C-16. We concur with the Staff's conclusion and find that Staff has taken the generic safety issues into account in a plausible manner.
