License No. 21-04125-01

Gentlemen:

This refers to the routine safety inspection conducted by P. J. Whiston of this office on August 5, 1982, of activities authorized by NRC Byproduct Material License No. 21-04125-01 and to the discussion of our findings with you and other members of your staff at the conclusion of the inspection.

The inspection was an examination of activities conducted under your license as they relate to radiation safety and to compliance with the Commission's rules and regulations and with the conditions of your license. The inspection consisted of a selective examination of procedures and representative records, observations, independent measurements, and interviews with personnel.

In addition to the above areas, the inspector examined actions described in your letter dated July 10, 1979, regarding apparent items of noncompliance found during our April 16 and 18, 1979, inspection. We have no further questions regarding these matters.

During this inspection, certain of your activities appeared to be in non-compliance with NRC requirements, as specified in the enclosed Appendix. A written response is required.

We are concerned that the substantial number of items identified may have been the result of an apparent lack of management control. In your reply to this letter, please address this concern, stating what management controls you intend to initiate to ensure all of your licensed activities are in compliance with NRC regulations and the conditions of your license. Please refer to the enclosed Appendix B.

The responses directed by this letter (and the accompanying Notice) are not subject to the clearance procedures of the Office of Management and Budget as required by the Paperwork Reduction Act of 1980, PL 96-511.
